

Layout & Maintenance

A Nature Aquarium layout requires a well-planned design, delicate planting, and the right tools to achieve them. ADA Layout Tools have been specifically designed for the purpose of intricate aquascaping. With the best technology and carefully selected materials, they are designed to be an extension of one's own hands in the aquarium.

PINSETTES
106-001 / S
106-002 / M
106-003 / L

The initial planting is a very important process which has to be done precisely and delicately. In particular, in the Nature Aquarium, which is an attempt to create Nature within the aquarium, the importance of the planting, comes first. ADA Pinsettes are designed solely for the planting of aquatic plants with the best utility. Meticulously hand made for accurate joint of 'the fingers' and the optimal hardness of the 'spring' based on thorough researches on the human technology. Available in 3 sizes to apply to all kinds of aquatic plants or purposes.

BOTTOM RELEASE
104-100

Improper insertion of substrate fertilizers (Multi Bottom and Iron Bottom), sometimes causes water-cloudiness or algae development. Bottom Release is a specially designed injector for ADA substrate fertilizers.

TRIMMING SCISSORS
106-011

In order to maintain the condition of planted aquariums, aquatic plants need to be trimmed regularly and withered leaves have to be removed carefully. With ADA Trimming Scissors, such work can be done easily and precisely. Long and narrow blades allow delicate operation even in small spaces. The shape of the handles are designed to perfectly fit your hand.

SAND FLATTENER
106-021

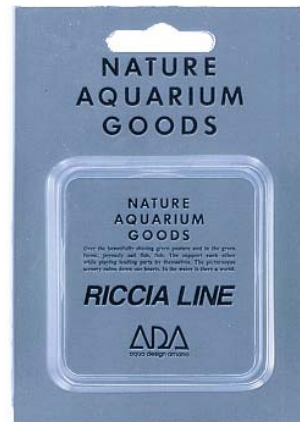

Sand Flattener is to make the front line of the substrate neat and flat. A tool to make subtle adjustments in the layout and maintenance, easy and enjoyable. Sand Flattener is also useful to assist in the planting of Cryptocoryne or Anubias which are difficult to plant with Pinsettes only.

RICCIA STONE
106-031

Although Riccia is by nature, a surface plant, it can be beautifully grown underwater, however, if not fixed properly on stones or driftwood, it would float and grow on the water surface. Riccia Stone is a layout material to fix Riccia on with Riccia Line. The flat shapes of Riccia Stone, allow the creation of a beautiful foreground carpet of Riccia.

- 10 pieces included

RICCIA LINE
106-032

A special thread to tie and fix Riccia on stones or driftwood in the aquarium. Durable material that does not deteriorate in the water. Used with Riccia Stone, it enables beautiful foreground layout with Riccia. In bright green color that matches with the color of Riccia.

- 50 m roll

MOSS COTTON
106-033

A special cotton thread to fix Willow Moss on driftwood or rocks. Made of quality cotton material which allows firm fixation of Willow Moss on various layout materials and will naturally biodegrade after Willow Moss has taken root to the driftwood or rocks. In a quiet dark green color similar to that of Willow Moss.

- 200 m roll

WOOD TIGHT
106-034

Wire designed to temporarily fix ferns such as Microsorium or Bolbitis on driftwood or rocks, until the plant roots takes hold by themselves. In a brown color that matches that of driftwood. Remove carefully after the plant takes firm root on driftwood or rocks.

- 10 m roll with a cutter
